

整体流程

1. 压缩包中包含可能会出现下载错误的所有包，请将其解压到mininet-environment文件夹下
【本地的mininet-environment文件夹与Virtual Box虚拟机上的/vagrant/为共享文件空间，会自动同步】。然后根据自己的报错，移动对应的文件夹至对应位置。（可能出现的错误如下所示）
2. 参考实验说明中【环境配置】的（3），注释掉mininet/util/install.sh中安装不下来的包。
3. 再次运行install.sh:
如下：sudo PYTHON=python3 mininet/util/install.sh -a

可能出现的错误

git clone <https://github.com/mininet/openflow>, 下载不下来

1. 移动文件夹：在虚拟机上，将/vagrant/openflow-master文件夹复制至/home/vagrant/openflow:

```
cp -rp /vagrant/openflow-master /home/vagrant/openflow
```

2. 注释掉mininet/util/install.sh中的git clone <https://github.com/mininet/openflow>,

3. 再次运行install.sh: sudo PYTHON=python3 mininet/util/install.sh -a

如果在运行脚本时出现下属问题，vi openflow/debian/automake.mk，用压缩包中的automaker.py文件的内容替换automake.mk文件的内容（直接复制内容，不要移动文件）

```
debian/automake.mk:2: error: trailing backslash on last line
Makefile.am:67: 'debian/automake.mk' included from here
autoreconf: automake failed with exit status: 1
```

fatal: unable to access '<https://github.com/noxrepo/pox.git/>': Failed to connect

```
installing POX into /home/vagrant/pox...
cloning into 'pox'...
fatal: unable to access 'https://github.com/noxrepo/pox.git/': Failed to connect to github.com port 443: Connection timed out
```

1. 移动文件夹：在虚拟机上，将/vagrant/pox-gar-experimental文件夹复制至/home/vagrant/pox:

```
cp -rp /vagrant/pox-gar-experimental /home/vagrant/pox
```

2. 注释掉mininet/util/install.sh中的git clone <https://github.com/noxrepo/pox.git/>

3. 再次运行install.sh: sudo PYTHON=python3 mininet/util/install.sh -a

fatal: unable to access '<https://github.com/floodlight/oftest/>': Failed to connect to github.com port 443: Connection timed out

```
fatal: unable to access 'https://github.com/floodlight/oftest/': Failed to connect to github.com port 443: Connection timed out
```

1. 移动文件夹：在虚拟机上，将/vagrant/oftest-master文件夹复制至/home/vagrant/oftest: cp -rp /vagrant/oftest-master /home/vagrant/oftest

2. 注释掉mininet/util/install.sh中的git clone <https://github.com/floodlight/oftest/>

3. 再次运行install.sh: sudo PYTHON=python3 mininet/util/install.sh -a

git clone <https://github.com/mininet/oflops>, 下载不下来

- 1.移动文件夹：在虚拟机上，将/vagrant/oflops-master文件夹复制至/home/vagrant/oflops: `cp -rp /vagrant/oflops-master /home/vagrant/oflops`
- 2.注释掉mininet/util/install.sh中的git clone <https://github.com/floodlight/oflops/>
- 3.再次运行install.sh: `sudo PYTHON=python3 mininet/util/install.sh -a`

注

上述四个包都位于/home/vagrant下，即同学们不需要切换目录。但如果存在其余问题，请根据mininet/util/install.sh切换至对应的目录。

如果openflow下载不下来，大概率上面提到的四个问题会同时出现，可以一次性移动所有文件夹并注释掉脚本中对应代码，减少等待时间。
